1. Number and ratio of stillbirths and perinatal deaths in 2000-2005 may differ from previously published data due to revisions in the database.
 2. In 2003, a question on pregnancy status among females aged 10-54 was added to the Idaho death certificate resulting in the identification of more maternal deaths. Maternal death data for 2003 and after are not comparable with data prior to 2003.
 3. Marriage, divorce, and specified abortion data are for events occurring in Idaho; all other data reflect events occurring to Idaho residents.
- Note: All rates are per 1,000 unless otherwise stated; see definitions for specific rates and ratio definitions.

1. Pregnancies include live births, induced abortions, and reportable stillbirths (only those fetal deaths with a gestational period of 20+ weeks or which weigh 350+ grams are required to be reported under Idaho law).
2. Pregnancy rate: Number of pregnancies per 1,000 females in corresponding age group. Rates for <15 age group are based on females aged 10-14. In 2003, Idaho received additional abortion records from Montana for Idaho resident induced abortions occurring in Montana. In 2006, Idaho received additional stillbirth records from Utah and Washington for Idaho resident stillbirths occurring in these states. Data bases from 1999-2004 have been revised to include these records in pregnancy numbers and shown on this table. Data may differ from previous publications due to updates in the data base, revisions in population estimates, and standardization of file cutoff dates.
